

Product Description

First CHOice® Medium and Feeds

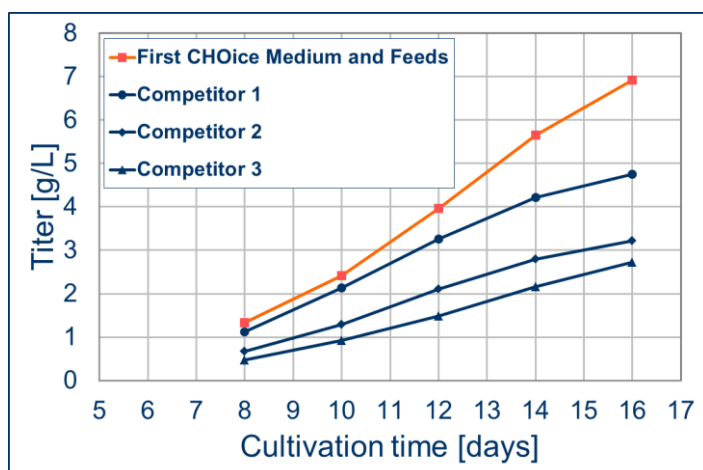

Overview

First CHOice® Medium is a high performance cell culture medium optimized for mammalian cell lines. In combination with CHOice® Feeds it has been optimized to boost the cell growth and productivity in batch, fed-batch and perfusion processes.

The completely chemically defined, animal component and protein free medium has been developed in close cooperation with customers using CHO-S, CHO-DG44 and CHO-K1 cell lines in order to minimize stress-related metabolites such as lactate and ammonia. In this way high product quality and cell viability is guaranteed during all cultivation phases.

Performance

Fed batch using First CHOice® Medium in combination with First CHOice® Feeds.

Further Information

Further product information are available upon request. Simply ask for a:

- Product Information Sheet
- Instruction Manual
- Material Safety Data Sheet (MSDS)
- Certificate of Analysis (CoA)
- Animal Component Free (ACF) Statement

On demand, we can support you with our experience to handle your CHO cell line in combination with First CHOice® Medium or First CHOice® Feeds. Our experts can assist you with routine cultivation, cell thaw and freezing and the performance of fed batches in shake flasks and various bioreactor systems.
